Investment Strategy

The Lupus alpha Low Beta Risk-Premium invests globally in various stock markets via an intelligent option strategy. The goal is to collect the low beta risk premium, also known as the leverage risk premium, in addition to the classic equity risk premium. Over a longer period of time, this should generate an attractive return that exceeds that of a global equity investment in a risk-adjusted manner.

Risk / Return Indicator *

In addition to the general risks detailed in the Sales Prospectus, the volatility risk on the European stock market is of special importance.

The Lupus alpha Low Beta Risk-Premium S is classified in category 5 as its unit price tends to fluctuate which means that both the risks of loss and the profit opportunities may be correspondingly .

For detailed information on opportunities and risks, please refer to the current Sales Prospectus.

* The presentation shows the Synthetic Risk and Reward Indicator ("SRRI") of the Fund's Key Investor Information Document ("KIID") and does not include all possible risks. Funds are subject to market-related price fluctuations which may result in losses up to the total loss of the invested capital. For additional risks and detailed information on the risk and return indicator, please refer to the current Key Investor Information Document. You may retrieve the Key Investor Information Document and the current Sales Prospectus from our website at www.lupusalpha.de.

- 1 - Source: Lupus alpha; gross performance (BVI method): The gross performance considers all costs incurred at Fund level (e. g. management fee) and assumes reinvestment of any distributions. Costs incurred at customer level such as sales charge and securities account costs are not included. Unless otherwise specified, all indicated performance data show the gross performance. Please note: Past performance is not a reliable indicator the future performance.
- 2 - Source: Lupus alpha; the net performance assumes a model calculation based on an invested amount of EUR 1,000, the maximum sales charge and a redemption charge (see master data). It does not include individual costs of the investor, such as a securities account fee. (To this effect, please refer to the price list of your securities account provider.) Please note: Past performance is not a reliable indicator for future performance.
- 3 - Volatility is the range of variation of a security price or index around its mean value over a fixed period of time. A security is regarded as volatile if its price fluctuates heavily. The tracking error describes the standard deviation (volatility) between the Fund's performance and the performance of the benchmark index. The higher the tracking error, the more the performance of the Fund deviates from the performance of the benchmark index. The investment ratio means the part of the Fund that is not invested in cash. Beta is a measure of a stock's risk of volatility compared to the overall market. The market's beta coefficient is 1.00. Any stock with a beta higher than 1.00 is considered more volatile than the market, and therefore riskier to hold, whereas a stock with a beta lower than 1.00 is expected to rise or fall more slowly than the market. The maximum drawdown is the largest percentage drop in value in a given period of time. It measures the amount the fund falls from its highest point to its lowest point in the selected timeframe.
- 4 - The initial sales charge is the difference between the sales price and the unit value. The sales charge varies depending on the type of the Fund and the distribution channel and usually covers advisory and distribution costs. The Distributor will demand the sales charge at its own discretion.
- 5 - The management fee is the fee for managing the Fund and taken from the Fund's assets; it is paid to Lupus alpha for the management and administration of the Fund.
- 6 - The performance fee is a performance-related remuneration depending on the performance or the achievement of specific objectives such as a better performance compared to a benchmark. The costs may also be levied if a pre-defined minimum performance has been achieved.
- 7 - Accumulating Funds reinvest the generated returns which means the returns remain in the Fund's assets permanently. Thus, they increase the unit value.

The Capital Management Company may also invest for the Fund more than 35% of the Fund's assets in debt obligations, note loans and money market instruments of one or several issuers (please refer to Section "Investment Limits for Public Issuers" in the Sales Prospectus).
