

## Lupus alpha Sustainable Convertible Bonds (C)

(as of: 30.06.2025) 1

For Marketing Purposes Only.

Investors domiciled in France should note that, relative to the expectations of the Autorité des Marchés Financiers, this UCITS presents disproportionate communication on the consideration of non-financial criteria in its management.

## Portfolio Management Team

Marc-Alexander  
Knieß

Stefan Schauer

Manuel Zell

The team members  
have average 18 years  
investment experience.

## Investment Strategy

The fund invests in a globally diversified portfolio of convertible bonds, which are selected according to principles of sustainable investing (ESG) [S1].

The fund is actively managed to benefit from the asymmetric risk/return profile of convertible bonds and to achieve capital appreciation above its benchmark.

The fund uses a broad spectrum of opportunities globally within the asset-class.

Foreign currency risks are systematically hedged to Euro.

## Category / Style

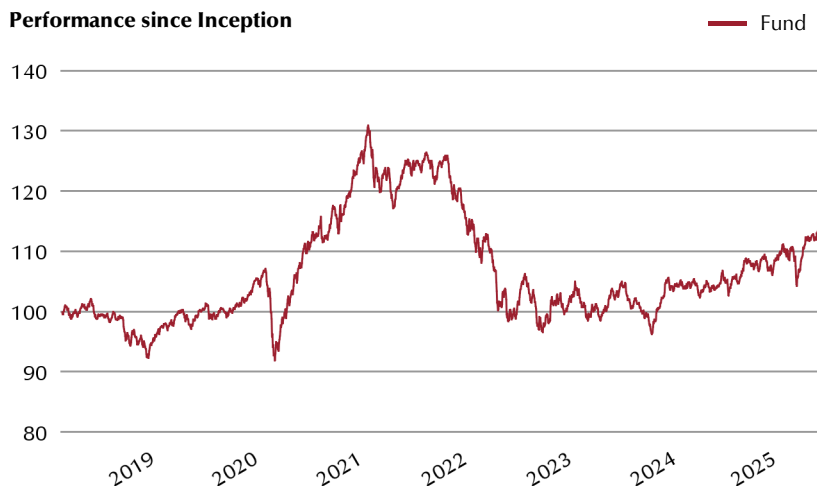

Global Convertible Bonds / Sustainable (Euro-hedged)

## Key Facts

Class	ISIN / German securities code (WKN)	Total Fund Size	Management Fee [5]	Performance Fee [6]	SFDR [S]	Inception Date	Benchmark
C	DE000A2DTNQ7 A2DTNQ	85.40 Mio EUR	currently 0.75%	none	8	01.03.2018	none

## Performance &amp; Key Statistics

## Performance since Inception

## Performance (gross) [1]

	Fund
Year to date	6.12%
1 year	8.86%
3 years	15.01%
5 years	5.03%
Since Inception p.a.	1.75%

## Key Statistics [3]

Volatility	7.64%
Sharpe Ratio	0.12
Max. Drawdown	-26.47%

## Highlights

Active selection of the most attractive convertible bonds from a global universe, taking sustainability aspects into account

Focus on particularly highgrowth underlying equities and bonds of solid qualities

The target is to achieve asymmetric equity participation as far as possible (convexity)

Long-standing, complementary expertise of the convertible bond portfolio management team with a successful track record

Consistent, transparent and award-winning investment process that integrates ESG and SDG aspects in the investment process of a global convertible bond portfolio

Total Expense Ratio (TER)	0.92% p.a. as of: 31.01.2025
Management-Fee [5]	currently 0.75%
Performance-Fee [6]	none

**Chances**

- Investors can benefit from the upside potential of convertible bonds and their various income sources.
- The asymmetrical risk-return profile allows investors to participate in stock markets while being protected by the bond characteristics of convertibles.
- Active management enables to exploit opportunities and ensures stringent risk management.

**Risk / Return Indicator [8]**

In addition to the general risks detailed in the Sales Prospectus, the volatility risk on the European stock market is of special importance.

The Lupus alpha Sustainable Convertible Bonds C fund is classified in category 3 because its unit price typically fluctuates rather minor and therefore both risks of loss and chances of gains can be correspondingly rather low.

For detailed information on opportunities and risks, please refer to the current Sales Prospectus.

**Risks**

- Counterparty default risk:**  
If counterparties and issuers do not fulfill or only partially fulfill their contractual payment obligations, this can result in losses for the fund. Even when securities are carefully selected, losses caused by the financial collapse of issuers cannot be ruled out.
- Concentration risk:**  
If investment is concentrated on particular assets or markets, the fund becomes particularly heavily dependent on the performance of these assets or markets.
- Risks connected with derivatives transactions:**  
Changes in the price of the underlying asset can devalue a derivative. If derivatives are used as part of the investment strategy, the Derivatives might have leverage effects that impact the fund more strongly than the underlying asset. When selling derivatives, there is the risk that the fund will suffer an indefinite loss amount.
- Operational risk:**  
The fund can become the victim of fraud, criminal acts or errors by company employees or external third parties. Finally, management of the fund can be negatively impacted by external events such as fires, natural disasters or similar.
- Liquidity risk:**  
If securities are traded in a relatively narrow market segment, it can be difficult to resell them in situations where there is insufficient liquidity.
- Interest-rate risk:**  
Changes in market interest rates can affect the price of fixed-income securities. These fluctuations vary, however, depending on the term of the fixed-income securities.
- Market risk:**  
The performance of financial products depends on the development of the capital markets.

## Legal Notice

- [1] Source: Lupus alpha; gross performance (BVI method): The gross performance considers all costs incurred at Fund level (e. g. management fee) and assumes reinvestment of any distributions. Costs incurred at customer level such as sales charge and securities account costs are not included. Unless otherwise specified, all indicated performance data show the gross performance. Please note: Past performance is not a reliable indicator for future performance.
- [2] Source: Lupus alpha; the net performance assumes a model calculation based on an invested amount of EUR 1,000, the maximum sales charge and a redemption charge (see master data). It does not include individual costs of the investor, such as a securities account fee. (To this effect, please refer to the price list of your securities account provider.) Please note: Past performance is not a reliable indicator for future performance.
- [3] Volatility is the range of variation of a security price or index around its mean value over a fixed period of time. A security is regarded as volatile if its price fluctuates heavily.  
The tracking error describes the standard deviation (volatility) between the Fund's performance and the performance of the benchmark index. The higher the tracking error, the more the performance of the Fund deviates from the performance of the benchmark index.  
Delta: measures the sensitivity of the convertible bond price on changes to the underlying equity price. A delta of 0,4 means that the price of the convertibel rises 4% if the underlying equity price rises 10%.  
Current yield is a bond's annual return based on its annual coupon payments and current price (as opposed to its original price or face). The formula for current yield is a bond's annual coupons divided by its current price.  
Interest rate sensitivity is a measure of how much the price of a fixed-income asset will fluctuate as a result of changes in the interest rate environment.  
Duration measures how long it takes, in years, for an investor to be repaid the bond's price by the bond's total cash flows.  
A rating defines the creditworthiness of an issuers or debtor. The average rating is the weighted rating of all debt obligations within a portfolio.  
Sharpe Ratio: Sharpe Ratio is the excess return (Fund performance less money market rate) in relation to the range of variation (volatility) and shows the yield of the Fund per risk unit. The higher the Sharpe Ratio, the more yield has been generated in relation to the risk incurred.  
The maximum drawdown is the largest percentage drop in value in a given period of time. It measures the amount the fund falls from its highest point to its lowest point in the selected timeframe.
- [4] The initial sales charge is the difference between the sales price and the unit value. The sales charge varies depending on the type of the Fund and the distribution channel and usually covers advisory and distribution costs. The Distributor will demand the sales charge at its own discretion.
- [5] The management fee is the fee for managing the Fund and taken from the Fund's assets; it is paid to Lupus alpha for the management and administration of the Fund.
- [6] The performance fee is a performance-related remuneration depending on the performance or the achievement of specific objectives such as a better performance compared to a benchmark. The costs may also be levied if a pre-defined minimum performance has been achieved.
- [7] Distributing Funds do not reinvest the generated income, they pay out the income to the investor.
- [8] The presentation shows the summary risk indicator (SRI) of the Fund's Key Information Document (KID) and does not include all possible risks. Funds are subject to market-related price fluctuations which may result in losses up to the total loss of the invested capital. For additional risks and detailed information on the summary risk indicator, please refer to the current Key Information Document. You may retrieve the Key Information Document and the current Sales Prospectus from our website at [www.lupusalpha.de](http://www.lupusalpha.de).
- [9] The fund promotes environmental and/or social features but does not target sustainable investments. It is classified as a product in accordance with Article 8 of Regulation (EU) 2019/2088 on sustainability-related disclosure requirements in the financial services sector ("SFDR").
- [10] For further information on the ESG methodology applied by the fund, please refer to the current prospectus, supplemented by the ESG-specific methodology of the fund on the company's homepage: [www.lupusalpha.de](http://www.lupusalpha.de).  
Both internal analysis and externally generated research is used during the investment process. External data are used to support the decision-making process. ESG-related data are largely provided by MSCI. These data are utilized in ESG filters and when analyzing controversies.
- [11] For CO2 intensity, the CO2 emissions (in metric tons) of each company in the portfolio are set in relation to the company's sales (in million USD). The portfolio-weighted average of this ratio is then calculated. The data refer to the part of the universe or fund for which corresponding data is available. The universe includes the global convertible bond market (source: Jefferies). Based on the MSCI ESG Climate Change Metrics: <https://www.msci.com/our-solutions/esg-investing/climate-solutions/climate-data-metrics>.
- [12] When considering the ESG score, we apply the methodology of MSCI ESG (MSCI ESG ratings: <https://www.msci.com/esg-ratings>). The part of the fund or universe for which no ESG score is available consists of bank deposits, FX forwards, and securities for which, due to technical reasons, no score was available on the reporting date (e.g., due to ISIN changes). However, the portfolio management team ensures prior to any investment that an ESG score is available for both the issuer and – if different – the underlying. Missing ESG scores for securities in the fund are therefore solely the result of a time-lagged system update. The universe includes the global convertible bond market (source: Jefferies).
- [13] When considering the ESG score, we apply the methodology of MSCI ESG (MSCI ESG Ratings: <https://www.msci.com/esg-ratings>). The KPIs mentioned are calculated as a portfolio-weighted average. The data refer to the part of the universe or fund for which corresponding data is available. The universe includes the global convertible bond market (source: Jefferies).
- [14] The Sustainable Development Goals (SDGs) are the United Nations' goals for sustainable development. Further information can be found at <https://sdgs.un.org/>. When assessing contributions to the SDGs based on revenue, we apply the methodology of MSCI ESG (Sustainable Impact Metrics: <https://www.msci.com/esg-sustainable-impact-metrics>). The KPIs mentioned are calculated as a portfolio-weighted average. The data refer to the part of the universe or fund for which corresponding data is available. The universe includes the global convertible bond market (source: Jefferies).
- [15] The Sustainable Development Goals (SDGs) are the United Nations' goals for sustainable development. Further information can be found at <https://sdgs.un.org>. The fund's contribution to the SDGs is measured by the proportion of portfolio companies that make a positive contribution to individual SDGs. This assessment is based on the MSCI ESG methodology, which systematically evaluates companies according to their overall alignment with each of the 17 SDGs (SDG Alignment Methodology: <https://www.msci.com/documents/1296102/15233886/MSCI+SDG+Alignment+Methodology.pdf>).
- [16] The classification of a controversy as "very severe," as well as the assessment of a company's direct responsibility and whether a controversy is considered resolved, are carried out according to the definitions of MSCI ESG Research. Companies that were involved in very severe but already resolved controversies are not automatically excluded.
- [17] The OECD Guidelines for Multinational Enterprises on Responsible Business Conduct provide recommendations from governments to multinational companies (<https://mneguidelines.oecd.org/mneguidelines/>).
- [18] The fund has been awarded the FNG label and the Austrian eco-label. Detailed information about the FNG label can be found at <https://www.fng-siegel.org>, and detailed information about the Austrian eco-label can be found at <https://www.umweltzeichen.at/en/about-us/start>.
- [19] Exclusion criteria according to the Paris-aligned EU Benchmark pursuant to Article 12(1)(a) to (g) of Commission Delegated Regulation (EU) 2020/1818 of 17 July 2020 (<https://eur-lex.europa.eu/legal-content/EN/TXT/PDF/?uri=CELEX:32020R1818>).

The Capital Management Company may also invest for the Fund more than 35% of the Fund's assets in debt obligations, note loans and money market instruments of one or several issuers (please refer to Section "Investment Limits for Public Issuers" in the Sales Prospectus).
