Investment Strategy

The Lupus alpha All Opportunities Fund follows a stock strategy focused on small- and mid-cap companies, utilizing a broad set of opportunities based on fundamental research. It benefits from the performance drivers of the small- and mid-cap universe: diversity, structural growth, and above-average participation in technological advancement, while simultaneously reducing high volatility and significant drawdowns. It is particularly suitable for investors who want to benefit from individual opportunities in European small- and mid-cap stocks but do not want to be fully exposed to the overall stock market risk. Within its investment universe of approximately 2,000 securities, the fund offers the opportunity to flexibly profit from trends in the stock market. The fund aims to outperform the European stock market on a risk-adjusted basis over the long term. The fund aims to exceed the European equity market in the long term on a risk-adjusted basis.

Category / Style

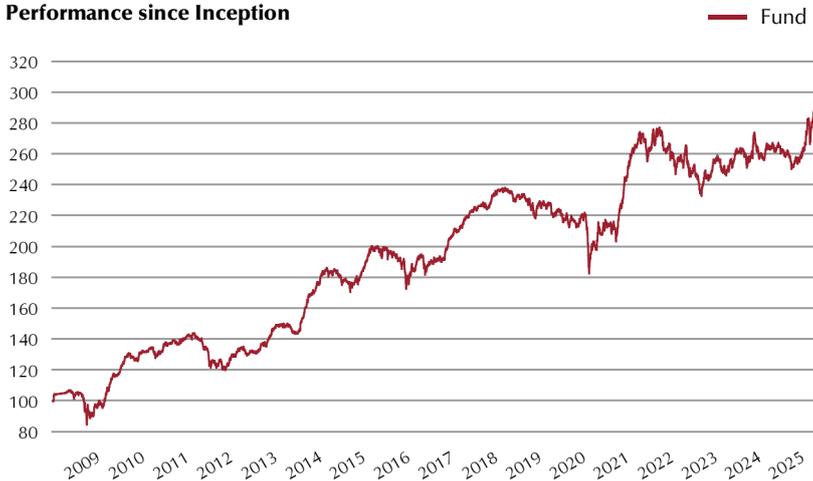

European small and mid caps / long-short

Chancen

- You benefit from the long-term experience of the largest small- and mid-cap teams.
- Excellent and long-standing historical performance.
- Promising upside potential of European small and mid caps.
- Flexible exploitation of various trends and opportunities in the stock markets.
- Participation in fundamental and technical events of individual stocks.
- You can benefit from the deep network that our fund managers foster with small- and mid-cap companies of our investment universe.

Risk / Return Indicator [11]

In addition to the general risks detailed in the Sales Prospectus, the volatility risk on the European stock market is of special importance.

The Lupus alpha All Opportunities Fund C fund is classified in category 3 because its unit price typically fluctuates rather minor and therefore both risks of loss and chances of gains can be correspondingly rather low.

For detailed information on opportunities and risks, please refer to the current Sales Prospectus.

Risks

- **Concentration risk:**
If investment is concentrated on particular assets or markets, the fund becomes particularly heavily dependent on the performance of these assets or markets.
- **Risks connected with derivatives transactions:**
Changes in the price of the underlying asset can devalue a derivative. If derivatives are used as part of the investment strategy, the Derivatives might have leverage effects that impact the fund more strongly than the underlying asset. When selling derivatives, there is the risk that the fund will suffer an indefinite loss amount.
- **Operational risk:**
The fund can become the victim of fraud, criminal acts or errors by company employees or external third parties. Finally, management of the fund can be negatively impacted by external events such as fires, natural disasters or similar.
- **Liquidity risk:**
If securities are traded in a relatively narrow market segment, it can be difficult to resell them in situations where there is insufficient liquidity.
- **Interest-rate risk:**
Changes in market interest rates can affect the price of fixed-income securities. These fluctuations vary, however, depending on the term of the fixed-income securities.
- **Risk of price changes:**
Experience shows that equities are subject to sharp price fluctuations and thus the risk of price declines. These fluctuations are particularly impacted by the earnings development of the issuing company as well as sector trends and overall economic development.
- **Market risk:**
The performance of financial products depends on the development of the capital markets.
- **Currency risk:**
Changes in exchange rates can affect the price of fund shares.

Legal Notice

- [1] Source: Lupus alpha; gross performance (BVI method): The gross performance considers all costs incurred at Fund level (e. g. management fee) and assumes reinvestment of any distributions. Costs incurred at customer level such as sales charge and securities account costs are not included. Unless otherwise specified, all indicated performance data show the gross performance. Please note: Past performance is not a reliable indicator for future performance.
- [2] Source: Lupus alpha; the net performance assumes a model calculation based on an invested amount of EUR 1,000, the maximum sales charge and a redemption charge (see master data). It does not include individual costs of the investor, such as a securities account fee. (To this effect, please refer to the price list of your securities account provider.) Please note: Past performance is not a reliable indicator for future performance.
- [3] Volatility: Volatility is the range of variation of a security price or index around its mean value over a fixed period of time. A security is regarded as volatile if its price fluctuates heavily.
Maximum loss 90 days: The maximum loss specifies the maximum potential loss an investor had to take in a 90 day timeframe.
VaR 95 – 10: Value at Risk defines the level of loss which will not be exceeded within 10 days with a probability of 95%.
VaR 99 – 10: Value at Risk defines the level of loss which will not be exceeded within 10 days with a probability of 99%.
Sharpe Ratio: Sharpe Ratio is the excess return (Fund performance less money market rate) in relation to the range of variation (volatility) and shows the yield of the Fund per risk unit. The higher the Sharpe Ratio, the more yield has been generated in relation to the risk incurred.
Maximum drawdown: The maximum drawdown is the largest percentage drop in value in a given period of time. It measures the amount the fund falls from its highest point to its lowest point in the selected timeframe.
- [4] The initial sales charge is the difference between the sales price and the unit value. The sales charge varies depending on the type of the Fund and the distribution channel and usually covers advisory and distribution costs. The Distributor will demand the sales charge at its own discretion.
- [5] The management fee is the fee for managing the Fund and taken from the Fund's assets; it is paid to Lupus alpha for the management and administration of the Fund.
- [6] The performance fee is a performance-related remuneration depending on the performance or the achievement of specific objectives such as a better performance compared to a benchmark. The costs may also be levied if a pre-defined minimum performance has been achieved.
- [7] The hurdle rate means a specific minimum interest and/or profit threshold a Fund has to achieve in order to allow the investment company to participate in the Fund's profit.
- [8] Performance fees of investment companies are frequently bound by a high watermark - the all-time high of the Fund. This means that a commission entitlement arises only if that mark has been exceeded.
- [9] Distributing Funds do not reinvest the generated income, they pay out the income to the investor.
- [10] The correlation measures the strength of the statistical relationship between two variables. A positive correlation means "the more ... the more", a negative correlation means "the more ... the less". The value of correlation is in the range between -1 (completely opposed) and +1 (completely equal). Correlations are some kind of no-tice on but no evidence for causalities which mean proven cause-effect relation-ships.
- [11] The presentation shows the summary risk indicator (SRI) of the Fund's Key Information Document (KID) and does not include all possible risks. Funds are subject to market-related price fluctuations which may result in losses up to the total loss of the invested capital. For additional risks and detailed information on the summary risk indicator, please refer to the current Key Information Document. You may retrieve the Key Information Document and the current Sales Prospectus from our website at www.lupusalpha.de.
- [S] The fund takes sustainability-related risks into account when making investment decisions and is classified as a product under Article 6 of Regulation (EU) 2019/2088 on sustainability-related disclosure requirements in the financial services sector ("SFDR").

The Subfund may invest more than 35% of the Fund's assets in securities and money market instruments of one or several issuers. These issuers are specified in the Management Regulations of the Subfund, section "Investment Restrictions and Risk Diversification".
